

## The company

Norsk Elektro Optikk A/S (NEO) was established in 1985 as a privately owned research oriented company within the field of electro optics. The founders had their scientific and technical background from the Norwegian Defence Research Establishment, which for the last 30-40 years have been the leading research organisation in electro optics in Norway.

The company has since its start grown to be the largest independent research and development organisation in electro optics in Norway, and has in addition established itself as a manufacturer of advanced electro optical products for an international market. Further information can be found at [NEO's web site](#)

HySpex is NEO's line of hyperspectral cameras. More information is available under the "[Products](#)" tab.

For a brief overview of NEO's activities in hyperspectral imaging, please download our [general brochure](#).
